

TEST TECHNICIAN/OPERATOR JOB DESCRIPTION

The Test Technician/Operator will:

Plan, develop, and conduct tests on electronic components, products, assemblies, and systems, applying knowledge and principles of electronic theory, testing methodology and procedures, and electronic engineering.

Read test schedules, job folders, schematics, etc., and utilize test instruments to test functional performance of systems, subassemblies, and parts.

Interpret results of tests, comparing them to customer specifications and/or industry standards.

Record test data for reports and future reference.

Skills/education needed for this position:

Associate or BS Degree in Electrical Engineering preferred but not required.

IPC 610 knowledge/familiarity is a plus.

High level of patience for repetitive work.

Ability to precisely communicate with all areas, including Production, Quality, and Engineering.
